## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, drawn to delaying dropping a data channel based on a data rate in a CDMA system, classified in class 370, subclass 441.
  - II. Claims 10-12, drawn to continuing to transmit on a previously affected channel during the time another customer uses that channel, classified in class 370, subclass 458.
  - III. Claims 13-14, drawn to delaying termination of a Temporary Block Flow by transmitting dummy data over a channel in a GPRS system, classified in class 370, subclass 442.
2. Inventions 1-9, 10-12 and 13-14 are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. Claims 1-9 disclose delaying dropping a data channel based on a data rate. Claims 10-12 disclose continuing to transmit on a previously affected channel during a time another customer uses that channel. Claims 13-14 disclose delaying termination of a Temporary Block Flow by transmitting dummy data over a channel.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2663
